Hands-on senior Laravel/PHP engineer with 15+ years of experience building scalable products, APIs, integrations, and engineering delivery systems.

PROFESSIONAL SUMMARY

Senior software engineer specializing in Laravel/PHP backend systems, API architecture, payment integrations, legacy modernization, and engineering delivery practices. Experience spans SaaS, education technology, e-commerce, healthcare content systems, and commercial PHP products.

Strong senior individual contributor who partners with product, design, platform, and engineering teams to turn ambiguous requirements into pragmatic architecture, reliable APIs, production-ready software, and healthier delivery workflows.

Core Strengths

- ◆ Laravel/PHP architecture, API design, and database-backed web applications
- ◆ Payment integrations, SaaS workflows, admin tooling, and internal platforms
- ◆ Developer experience, code quality, documentation, automated testing, and static analysis
- ◆ CI/CD, deployment workflows, observability, and production operations
- ◆ Cloud and platform work across Cloudflare, AWS, OpenShift, Docker, and Linux servers
- ◆ Technical mentoring, code review, engineering standards, and delivery planning
- ◆ AI-assisted engineering for analysis, documentation, workflow efficiency, and problem-solving with latest harness tools

WORK EXPERIENCE

FEBRUARY 2024 – PRESENT

SENIOR SOFTWARE ENGINEER, ONEVERSE

- Build and maintain the [core app](#) with Laravel, Filament, Tailwind CSS, Pest, and PostgreSQL.
- Integrated 10+ payment providers and 70+ payment channels across Asia, expanding checkout coverage for regional users.
- Serve as the team's Laravel subject-matter expert, guiding backend design, implementation choices, and code quality.
- Co-architected microservices-based systems to improve scalability, modularity, and long-term maintainability.
- **Stack:** Laravel, Filament, Inertia.js, Vue.js, Livewire, Tailwind CSS, Pest.

MARCH 2023 – FEBRUARY 2024

SENIOR BACKEND SOFTWARE ENGINEER, FEMMILY

- Refactored and migrated two legacy Laravel applications into a more maintainable foundation.
- Introduced CI/CD and error tracking to improve release confidence, production visibility, and incident response.
- Established coding standards and streamlined Git workflows, including the repository migration from Bitbucket to GitHub.
- Architected and set up the AWS production environment for the soft-launch phase.
- Supported a delayed project through its soft-launch deadline by sharpening delivery focus, mentoring team members, and aligning stakeholder priorities.
- **Stack:** Laravel, MySQL, Livewire, Filament, PHPStan, Pest.
- **Tools:** GitHub, Forge, Flare, Bagisto, AWS.

JANUARY 2019 – MARCH 2023

SENIOR SOFTWARE ENGINEER, FROGASIA

- Maintained backend APIs for a national learning platform serving 10,000+ Malaysian schools across web and mobile clients.
- Built and supported an online training platform used by 25+ large corporates, including YTL Construction and YTL Hotels.
- Delivered features across Lesson Planner, Curriculum Designer, Boost, Certificate, Courses, Workspaces, and analytics dashboard products.
- Partnered with architects and product owners to convert requirements into end-to-end architecture, technical tasks, and delivery estimates.
- Improved delivery quality by mentoring peer engineers, removing blockers, reviewing merge requests, and strengthening operational visibility through logging, metrics, health monitoring, Elasticsearch, and data lake pipelines.
- **Stack:** PHP, Laravel, React, MySQL, Firebase, RabbitMQ, Red Hat OpenShift Linux.
- **Tools:** GitLab, CI/CD pipelines, OpenShift, Docker, Figma, Vault, NiFi.

JANUARY 2017 – DECEMBER 2018

PRINCIPLE SOFTWARE ENGINEER, MODEFAIR

- Led backend architecture and API design for an e-commerce application covering campaign management, merchant onboarding, product listings, business reporting, and audit logs.
- Implemented zero-downtime deployment and rollback workflows to reduce release risk.
- Managed deployments across staging, production servers, and supporting cloud services.
- Built supporting microservices for image compression, PDF report generation, and social media data mining across Instagram and Facebook.

- Promoted coding standards, design patterns, engineering guidelines, and backend best practices across the team.
- **Stack:** Ubuntu, Nginx, PHP 7, AWS EC2, S3, RDS, Cloudflare, Laravel, Redis.
- **Tools:** Deployer, Composer, Git, SSH, Slack, Let's Encrypt.

JANUARY 2013 – DECEMBER 2016

APPLICATION DEVELOPER, P\S\L GROUP

- Developed dynamic filtered newsfeed systems from aggregated data for pharmaceutical industry clients.
- Built an automated newsletter builder and email tracking system for targeted healthcare content delivery.
- Deployed micro-social sites with live newsfeeds and newsletter workflows.
- Received the Level 1 Real-Time Recognition Award.
- **Stack:** CentOS, Apache, PHP 5, MySQL, Drupal.
- **Tools:** Drush, G Suite, SVN, PHP_CodeSniffer, PHPUnit.

JUNE 2011 – DECEMBER 2012

SOFTWARE DEVELOPER, STACKIDEAS

- Built product features for EasyBlog, EasyDiscuss, and Komento Joomla CMS extensions.
- Supported customers through forum and ticket workflows, translating product issues into fixes and improvements.
- **Stack:** Apache, PHP, Joomla, JavaScript, CSS.

JUNE 2009 – MAY 2011

SOFTWARE ENGINEER, SLASHES & DOTS

- Built core product features for the JomSocial Joomla CMS extension.
- Implemented video uploads and a custom video player with Amazon S3 integration.
- **Stack:** Apache, PHP, Joomla.
